II.—PUBLIC ANALYSIS.

1. Report upon Articles Analysed during the year 1894...	31
--	----

TO THE CHAIRMAN AND MEMBERS

OF THE

Westry of St. James, Westminster.

MR. CHAIRMAN AND GENTLEMEN,

I have the honour to submit my Annual Report upon the Public Health of the Parish of St. James's, Westminster, for the year 1894.

The figures given by the Census of 1891 showed that the resident population in St. James's then numbered 24,993 — the District covering an area of 162 acres. Taking the population at 24,993, that would be an average of 154·22 persons per acre in 1891, against 184 per acre in 1881. The Census of 1891 gave the mean density of the population in Registration London as 56·5 persons per acre.

During the year 1894 the net mortality in the district of St. James's has been 390 deaths. Taking the population of St. James's as 24,993, 390 deaths gives a death-rate of 15·64 for each 1,000 persons living in the district.

The above figure for the net mortality is obtained by taking the deaths registered as having occurred in St. James's, adding to this number the deaths in outlying institutions of persons who had been removed from St. James's, and then subtracting the deaths registered in St. James's of persons who were reported as non-parishioners. This procedure gives the following figures:—

$$318 + 111 - 39 = 390 \text{ net mortality.}$$

The following figures show the mortality data in greater detail. The deaths registered as having occurred in St. James's, for the four quarters of the year 1894, were as follows:—

First Quarter	101
Second Quarter	64
Third Quarter	64
Fourth Quarter	89
					<hr/>
Deaths in St. James's during the four quarters of the year 1894	318
Deaths in outlying institutions among persons reported as belonging to St. James's	..				111
					<hr/>
					429
					<hr/>

Deduct deaths of persons reported as Non-Parishioners:—

Dying in the Union House	27
Dying in the Throat Hospital	10
Dying in the Hospital for Paralysis	1
Dying elsewhere	1
				<hr/>
				39
				<hr/>
Net Mortality of St. James's for the year 1894				390
				<hr/>

During the year 1894, 27 bodies were removed into the Mortuary. Ten inquests have been held upon bodies lying in the Mortuary, and 10 *post-mortem* examinations for judicial purposes have been made in the Examination Room adjoining the Mortuary.

The following Table gives a summary of the certified causes of death among persons dying in outlying institutions, but reported as having come from the district of St. James's, Westminster:—

Accidental Injury	2
Apoplexy	3
Blood Poisoning	1

Brain Disease...	5
Bronchitis	10
Cancer	8
Cellulitis	2
Diabetes	1
Diphtheria	7
Diarrhoea	1
Heart Disease...	4
Kidney Disease	2
Liver Disease	1
Mania	7
Measles	1
Myelitis	1
Murder (Pistol Shot at Café Royal)...	1
Paralysis	6
Peritonitis	2
Phthisis	23
Pleurisy	1
Pneumonia	8
Pregnancy	1
Prostate, Disease of	1
Rheumatism	1
Scarlet Fever	3
Small Pox	1
Syncope	2
Syphilis	1
Typhoid	3
Tuberculosis	1

The true death-rate in St. James's is further affected by the deaths of casual strangers who die in hotels and lodging-houses. A large number of hotels and lodging-houses are contained in the well-known fashionable quarters near the great clubs of St. James's Street and Pall Mall.

To these there come invalids in attendance upon London Physicians and Surgeons, and, in such cases, the line between residents and non-residents is difficult to draw. The deaths deducted on page 4 are only those of persons officially noted by the Registrar as non-residents. In the case, for instance, of the sick-poor, the Union House for St. James's and St. Anne's is located in St. James's, and this receives not only the sick-poor from another parish, but also many casual unfortunates and homeless persons who fall sick while passing through St. James's. Of the 27 strangers who found a last refuge in the Union House in St. James's, the entries of women run—widow, 72; widow, 71; 71 unknown; 57 servant; 70, 65, 61, 72, 65, 50, 35 spinster homeless; 72 no home; 81, &c. The entries of the men run—86, 65, 68; a window cleaner from Marylebone, aged 33, killed by falling out of a window; 69, 73, 68, 60, 76, 59, 57, 59, 90. It is mournful to see aged persons left homeless and destitute, when incapacitated from work by reason of sickness or senile decay; but the English law mercifully puts a first mortgage upon all the real property of the country, in order to provide that every such person shall find, at the hands of the Guardians of the Poor, a comfortable home at the expense of the local ratepayers.

The cases dying in the Throat Hospital, again, come from various country places and are mostly persons suffering from malignant disease of the throat, who, not content to submit to the inevitable and to make the best of such residue of life as remains to them, come up to London and die of a futile operation.

The following Table shows the periods of life in which the deaths in St. James's have occurred in the last Seven years respectively.

		Under 1 Year of Age.	Above 1 and under 5.	Above 5 and under 20.	Above 20 and under 40.	Above 40 and under 60.	Above 60 and under 80.	Above 80.	Total.

During the 25 years, 1870-1894 inclusive, the deaths from these Zymotics were 1,265, being an average yearly mortality of 50·60.
The Zymotic deaths registered in the Parish during the year 1894 were 33.

The Table on page 9 shows the Zymotic and some other deaths in each quarter of the year 1894.
All deaths not included in this Table are detailed in Table I., pages 10 to 13.

Of the notifiable Infectious Diseases, 152 cases came under notice during the year 1894. Of these 152 cases 59 were Scarlet Fever; 3 were of Small Pox; 37 were of Diphtheria; 23 were of Erysipelas; 24 were of Typhoid; 2 were of Continued Fever; 1 was of Puerperal Fever; 1 was of Cholera, and 2 were of Membranous Croup. Of the 152 cases, 82 were removed to Extra-Parochial Hospitals, 3 to the Poor Law Infirmary in Cleveland Street, and 5 to other places; 62 of the cases were not removed. Details of these 152 cases are appended in Table II, pages 14 to 24.

Table showing the Names and Numbers of Zymotic and certain other deaths which occurred in St. James's in each Quarter of the Year, 1894.

APPENDIX TO REPORT OF MEDICAL OFFICER OF HEALTH.

REPORT OF SANITARY INSPECTORS AS TO CONDITION OF BAKEHOUSES IN THE PARISH DURING THE YEAR 1894.

January 15th, 1895.

To the Sanitary and Parliamentary Bills Committee.

MR. CHAIRMAN AND GENTLEMEN,

We beg to report having visited the whole of the Bakehouses (numbering 27) in the Parish during the year 1894. In some cases the Bakehouses were in excellent condition, in 9 cases certain defects were found (none of a serious nature), all of which were remedied on request. Three out of the above number were not, at the time of our visit, being used as Bakehouses.

In one case only admission was refused, the Owner of which was summoned and fined.

Taking the Bakehouses of this Parish generally, they are kept in fair cleanly condition, and the Owners very readily comply with any request made for improvement in the same.

We are,

Mr. Chairman and Gentlemen,

Your obedient Servants,

W. H. WATSON, } *Sanitary*
J. P. FOLLAND, } *Inspectors.*

PARISH OF ST. JAMES, WESTMINSTER.

WILLIAM HILL WATSON, Chief Sanitary Inspector.

The facts of the analyses are sufficiently shown in the table annexed. In no case has the results of the analysis been disputed successfully.

No money or consideration, other than the stipend paid by the Vestry, has been received by me in connection with these analyses.

I have the honour to remain,

Mr. Chairman and Gentlemen,

Your obedient Servant,

JAMES EDMUNDS.

29, DOVER STREET, PICCADILLY.
